

Trade Model

Follow the scenario without chaos and unnecessary markup

Context without guesswork

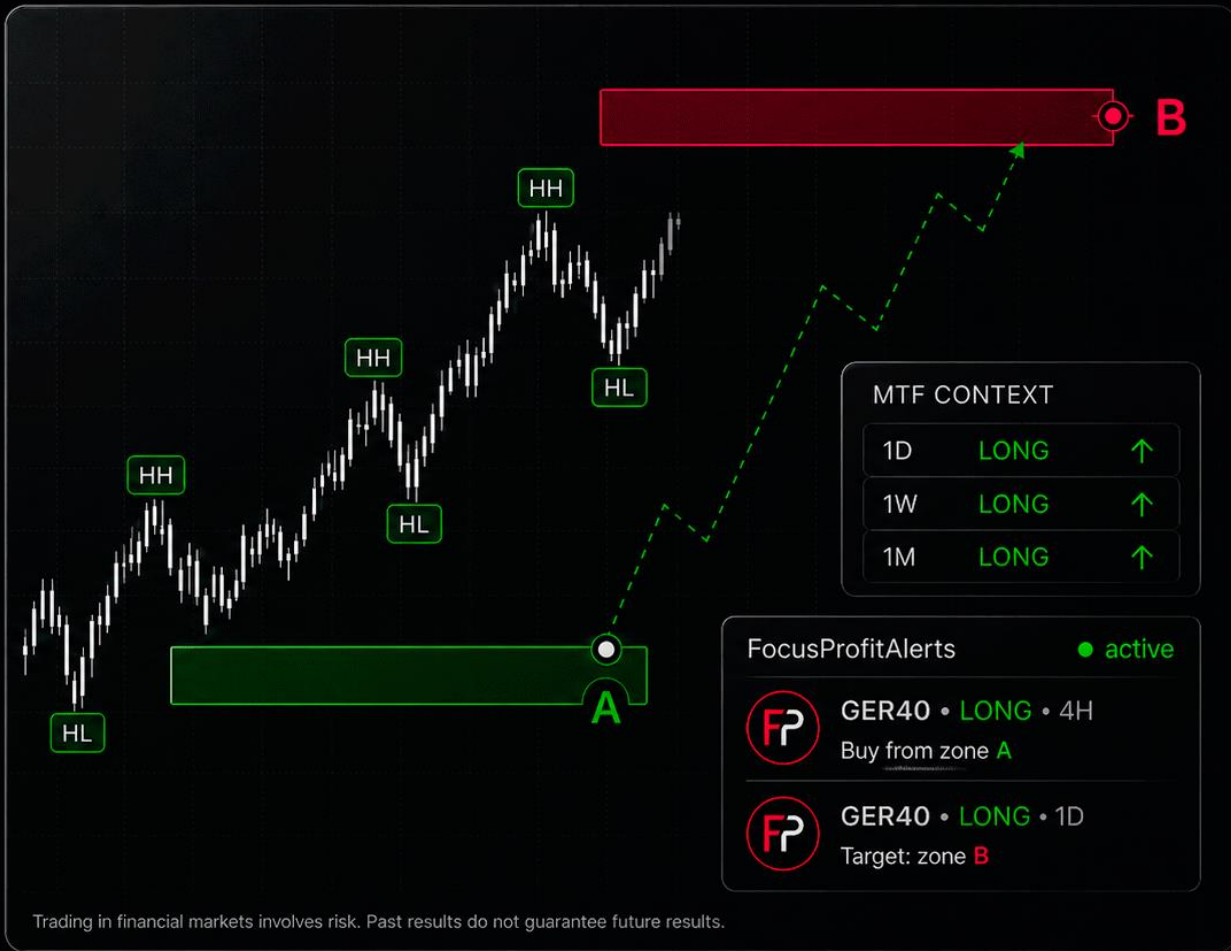

A → B scenario

Range alerts

Get access →

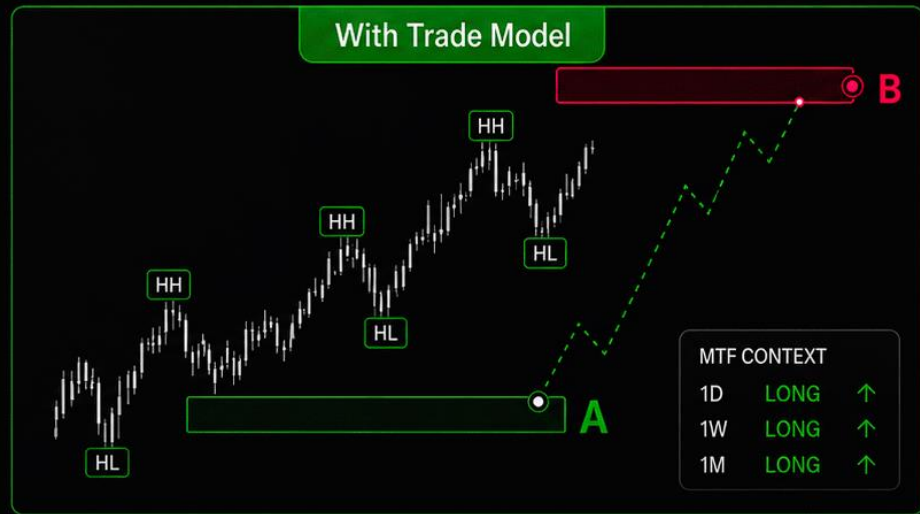

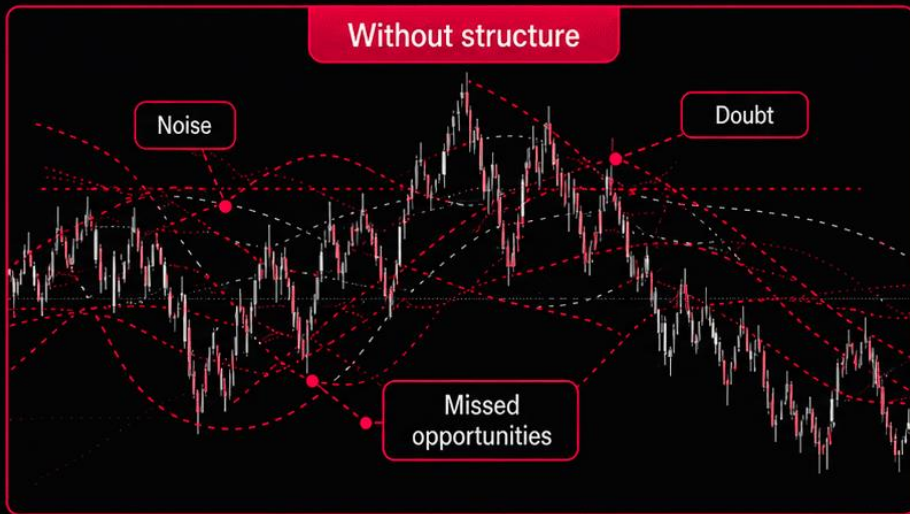

Trading in financial markets involves risk. Past results do not guarantee future results.

How it works

| It does not find the idea for you — it helps manage the scenario you already chose

From chaos — to a clear scenario

Clear context
See the bigger picture

Market structure
You follow the market, not guess

Range-based work
Buy in zone A, sell in zone B

Timely alerts
You don't miss what matters

What the **trader** gets

1. Clear context

The directional bias is visible immediately

2. Clear scenario

Entry point, target and logic in advance

3. Range control

Key zones are always under control

4. Timely alerts

Signals arrive on important events

FocusProfitAlerts

Buy from zone **A** → Target: zone **B**

Who it's **for**

1. For traders who already work with the market

2. For those who build a scenario manually and want to manage it systematically

3. For those who care about ranges, structure, and MTF context

4. **Not for those** looking for a "magic signal button"
